

CARtlog

Project Description:

- CARTlog is a website built as part of learning the power of Bootstrap on web application.
- It is a cat-log website for cars where user can browse through various cars and find their best car. Also guarantees to provide best maintenance services for their car.
- This project is developed as part of learning, understanding and implementing Frontend Web Development technology.
- Tech used: HTML 5, CSS 3, JavaScript, Bootstrap 4

Learnings:

- Learn the fundamentals of implementing responsive web design.
- Learn to use Balsamiq to mockup and wireframe websites.
- Bootstrap Increases the development speed, allows responsiveness, cross browser compatibility and easy to customize.
- Using the Bootstrap framework saves time in many ways by taking advantage of reusable code for Navbars, Dropdowns, Labels, Alerts, List groups and JavaScript plugins.
