

# Newsie World

## Project Description:

- Newsie World is site that shares the newsletter to their authenticated user's mail account.
- Built as part of learning the usage of APIs in web development.
- The website asks for user credentials for registration and verifies and signs up for sending news to their shared mail account.
- On successful authentication of user, it displays a success message. Similarly on unsuccessful authentication, it displays a failure message
- This project is developed as part of learning, understanding and implementing Full Stack Development technology.
- Tech used: HTML 5, CSS 3, JavaScript ES6, Node JS, APIs, Postman

The screenshot shows a web form titled "Signup to My Newsletter!". At the top is a logo featuring a globe with the word "NEWS" in a purple banner across it. Below the title are three input fields: the first contains "Jon", the second contains "Favarou", and the third contains "jfb8@gmail.com". A blue button labeled "Sign Me Up!" is positioned below the input fields. At the bottom of the form area, there is a small copyright notice: "© Newsie World".

Awesome!

you've been signed up successfully to the newsletter, look forward to lots of awesome content!

## Learnings:

- An API allows the communication between 2 applications. An application "A" (at user's side) sends a query to the application "B" (the web platform) and then "B" returns a response with the information or the result of the action requested in the query from "A". Furthermore, if any changes are made in any particular part, it will not affect other parts of the application.
